[illegible]

The present invention relates to polymer-based double product having reversible linkage involving main or hydroxyl radicals of chemical compounds and biol. active materials such as amino acids, nucleic acids, proteins, and enzymes. The polymer is a thermally stable portion of the double product is cleaved and the parent mol. is generated rapidly thereafter *in vivo*, as a result of a triallyl lock type lamination-type reaction. The advantages of double product concept, are that they are capable of stabilizing reaction or
